Free 3d optical mouse 5v 100ma usb mouse driver 5d optical mouse rating 5v 100ma driver 2.5 dpi usb ergonomic 3d. This invention relates generally to the field of telecommunications and more particularly to a method and apparatus of summarizing a call or series of calls for billing purposes and the determination of a call's cost. With the advent of more sophisticated telecommunications services, different entities are now often responsible for providing different services to their customer base. For example, a residential service provider may be responsible for providing telecommunications services to their

customers such as local and long distance service while a local exchange carrier may be responsible for providing telecommunications services to their customers by way of their phone service. In this scenario, the local exchange carrier (the carrier of record) may have a relationship with a service provider (another entity that provides telecommunications services) to provide other services such as prepaid calling services, resale of a prepaid services provider, etc. Recently, the telecommunications industry has begun offering customers the ability to purchase services and/or features on a pre-paid basis. For example, the customer may wish to purchase a prepaid calling card in increments of minutes that may be used on a particular call. The customer may also wish to purchase a prepaid mobile service to be used on a mobile phone. In any case, it is desirable to be able to measure the usage of each service on a per customer basis to accurately bill the customer and provide a report of each customer's activities. To be able to monitor and charge a customer for the use of services, the customer is usually required to call or otherwise place a request for the service to a service provider that is responsible for billing for the services. For example, the service provider may query the customer to determine if they are still a customer and, if so, to provide the customer with a summary of their billing records.

However, the customers may be required to
